## CUVÂNT INTRODUCATIV

Dezvoltarea și diversificarea semnificativă a terminologiei medicale generate de progresele considerabile ale științelor medicale și farmaceutice din ultimele decenii sunt accelerate și de “boom-ul” informațional semnalat firesc și în domeniul medical. Este așadar imperativă actualizarea permanentă a listei de unități lexicale și expresii specializate, prin adăugarea unor sensuri noi termenilor existenți în lucrările precedente, nu foarte numeroase, de altfel.

Dicționarul medical și farmaceutic elaborat de doamna lector dr. Diana Ligia Tudor reprezintă un instrument foarte util de lucru și informare prin numărul mare de termeni din domeniul medical și farmaceutic, oglindind totodată stadiul actual al bazei terminologice din literatura de specialitate.

După o minuțioasă documentare, conștientă fiind de complexitatea activității de cercetare pentru elaborarea unui dicționar ca cel de față, autoarea a cuprins în lucrarea sa o cantitate considerabilă de termeni, cu delimitarea eficientă a sensurilor fiecăruia, furnizând astfel informații complementare pentru explicarea unor cuvinte și expresii cu grad sporit de complexitate, selectând și organizând intrările prin consultarea unor importante lucrări lexicografice din acest domeniu. Intrările sunt însoțite de indicații gramaticale de bază privind categoria morfologică (substantiv, adjectiv, verb, adverb), menite să ușureze integrarea termenilor în sistemul flexionar al limbii române.

Astfel, Dicționarul reprezintă o importantă „bancă” terminologică pentru specialiștii din domeniul medicinei și farmaciei, pentru studenți și traducătorii de literatură medicală și pentru cei care, într-o formă sau alta, intră în contact cu terminologia specializată a acestui domeniu.
